

RATE SCHEDULE FDD
 Firm Deferred Delivery Service
 (Dth)

Options

Under each of the options that follow, Shipper shall be required to allocate its injection and withdrawal quantities as a pro rata share of the total aggregate FDD contract quantities, based on the Shipper's total FSQ or FDQ and the storage option election. A Shipper is entitled to a minimum of the injection and withdrawal parameters that result from using the FDD annual cycle quantity available in the three (3) types of service listed above. Account Balance quantities that are less than or greater than the Account Balance parameters contained in Shipper's Service Agreement shall be subject to the authorized overrun charge as fully described in Section 3. below. In the event that the Shipper has multiple FDD Service Agreements, Northern will net the Shipper's FDD account balances prior to determining the authorized overrun charge, provided that the Shipper has selected the same service type for each of the FDD Service Agreements. Should Shipper nominate injection or withdrawal quantities which would preclude Shipper's ability to meet subsequent periodic Account Balance parameters or subsequent Injection Period or Withdrawal Period quantities, Northern shall have the right to refuse to schedule such quantities.
